4.)

The reason to manage this outstanding event was to make my old dream come true, to organize performance in pool ultra long distance swimming so unique, that nobody in our country had ever tried and to become the first man ever that successfully performs.

The most significant advantages to open water swimming are the punctual, provable and replicable measurement conditions, simple rules verification of used swimming styles and the safety of the swimmer (cold water, unpredictable weather, medical assistance, boat assistance and illumination).

The task was to swim marathon using physical the most hardest and challenging swimming style butterfly. Because I have achieved really good scores in pool ultra long distance swimming in Czech republic, I would like to have a chance to confront my achievement with other athlets throughout the world and to assess if my performance is the most worthwhile in the world. I am sure that equally to Czech republic, there are not much athletes qualified and compliant to perform so long distance using physical the most hardest and challenging swimming style butterfly. Similar efforts are registered and supervised by Your Guinness World Records, so that I contact You via this application and appeal You to verificate and confrontate my effort to achievements of other competitors from entire the world and to assess if my performance could be recognized as the world record.

In case that our achievement could be recognized as the record setting, we would be delighted to belong to proud record breakes priding on world records recognized in the Guinness world records.
